

Process Engineer

For a chemical multinational we are hiring a **Sr. Process Engineer**

Job description

Provides a technical resource to project teams and/or provides expertise in specific fields, tools or theory. Provides solutions which add value through improvements in work process, unit operations, operating condition and/or process technology. Requires conceptual knowledge of theories, practices, and procedures within a job discipline.

Responsibilities / Duties

- ✓ Applies Global Project Methodology (GPM) and Process Engineering Work Process Discipline.
- ✓ Ensures that the project scope is well defined and meets the business needs in a cost effective manner.
- ✓ Ensures that the process design is safe, meets DOW LPP's and other EH&S requirements.
- ✓ Drives project execution within their discipline.
- ✓ Provides input to project schedule and plans, then monitors progress against the plans.
- ✓ Ensures process design deliverables meet the needs of the project including functioning as intended, on time and within budget.
- ✓ Identifies technical problems both within designs and existing operations. Appropriately engages the business and functional technology center and the subject matter expert network to resolve.

Your qualifications

- ✓ Undergraduate Degree Engineering
- ✓ Experience in Process flow and production
- ✓ Ownership of production equipment unit at all levels ensuring optimum processing
- ✓ Understanding and maintaining subsystems of both mechanical and electrical nature
- ✓ Contributing to defining experiment parameters. Using statistical analysis to perform design of experiments
- ✓ Developing, planning and executing process engineering for the production of a broad range of materials
- ✓ Collecting and analyzing data. Generating reports to communicate results
- ✓ Operationally focusing on improving processes and product quality, yields, cost and performance
- ✓ Facilitating product development from research to manufacturer
